

**SÈRIE 1****Primera part****Exercici 1**

Q1 c      Q2 c      Q3 d      Q4 a      Q5 b

**Exercici 2**

a)

v	t	p	c
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	1
1	0	1	1
1	1	0	1
1	1	1	1

b)  $c = \bar{v} \cdot t \cdot p + v \cdot \bar{t} \cdot \bar{p} + v \cdot \bar{t} \cdot p + v \cdot t \cdot \bar{p} + v \cdot t \cdot p \Rightarrow c = v + t \cdot p$ 

c)

**Segona part****OPCIÓ A****Exercici 3**a) Calen  $n_T = 12$  triangles equilàters  $\rightarrow p_T = n_T \cdot 3 b = 10,8$  mb) Calen  $n_R = 6$  rombes  $\rightarrow p_R = n_R \cdot 4 b = 7,2$  mc)  $p_E = 12 b = 3,6$  md)  $s = 12 \frac{\sqrt{3} b^2}{4} = 0,4677$  m<sup>2</sup>OPCIÓ T:  $c_T = 15 \cdot 0,4677 + 0,6 \cdot 10,8 = 13,49$  €OPCIÓ R:  $c_R = 15 \cdot 0,4677 + 0,6 \cdot 7,2 = 11,33$  €OPCIÓ E:  $c_E = 15 \cdot 0,4677 + 1,4 \cdot 3,6 = 12,05$  €

L'opció R, és a dir, fabricar l'estrella mitjançant rombes, és la més econòmica.

**Exercici 4**

$$a) P_{\text{càrrega}} = \frac{m g \Delta h}{t} = 2043 \text{ W}$$

$$b) \eta_{\text{red}} = \frac{P_{\text{càrrega}}}{P_m} \Rightarrow P_m = \frac{P_{\text{càrrega}}}{\eta_{\text{red}}} = 2919 \text{ W}; \quad T_m = \frac{P_m}{n \left( \frac{2\pi}{60} \right)} = 18,58 \text{ Nm}$$

$$c) \eta_{\text{mot}} = \frac{P_m}{P_{\text{elèc}}} \Rightarrow P_{\text{elèc}} = \frac{P_m}{\eta_{\text{mot}}} = 3742 \text{ W}; \quad I = \frac{P_{\text{elèc}}}{U} = 17,01 \text{ A}$$

$$d) P_{\text{dis}} = P_{\text{elèc}} - P_{\text{càrrega}} = P_{\text{elèc}} (1 - \eta_{\text{mot}} \eta_{\text{red}}) = 1699 \text{ W}$$

**OPCIÓ B****Exercici 3**

$$b) m = V \rho_{\text{alumini}} = 2 L^2 e \rho_{\text{alumini}} = 27,10 \text{ kg}$$

$$c) \sum F_{\text{horizontals}} = 0 \rightarrow F_h = T \cos 30^\circ$$

$$\sum F_{\text{verticals}} = 0 \rightarrow F_v + T \sin 30^\circ = mg$$

$$\sum M(A) = 0 \rightarrow F_v 2L = mg L$$

Resolent el sistema lineal anterior, s'arriba a la següent solució:

$$F_v = mg/2 = 132,9 \text{ N}, \quad T = mg = 265,8 \text{ N}, \quad F_h = \sqrt{3} mg / 2 = 230,2 \text{ N}$$

$$d) \sigma = \frac{T}{\frac{\pi d^2}{4}} = 84,60 \text{ MPa}; \quad \sigma = E_{\text{acer}} \varepsilon \Rightarrow \varepsilon = \frac{\sigma}{E_{\text{acer}}} = 0,0004087 = 0,04087\%$$

Com que  $\sigma < \sigma_{e,\text{acer}}$ , el cable no s'arriba a deformar plàsticament.

**Exercici 4**

$$a) R = \frac{U_{\text{bateries}} - 5 U_{\text{LED}}}{3 I_{\text{LED},4}} = \frac{4 U_{\text{bat}} - 5 U_{\text{LED}}}{3 I_{\text{LED},4}} = 413,3 \Omega$$

$$b) P_{\text{total}} = U_{\text{bateries}} \cdot 3 I_{\text{LED},4} = 4 U_{\text{bat}} \cdot 3 I_{\text{LED},4} = 3,600 \text{ W} \Rightarrow E_{\text{total}} = P_{\text{total}} t = 103,7 \text{ kJ} = 28,80 \text{ Wh}$$

$$c) t_{\text{bat},4} = \frac{C_{\text{bat}}}{3 I_{\text{LED},4}} = 133,3 \text{ h}$$

$$d) I_{\text{LED},3} = \frac{U_{\text{bateries}} - 5 U_{\text{LED}}}{3 R} = \frac{3 U_{\text{bat}} - 5 U_{\text{LED}}}{3 R} = 0,01532 \text{ A} = 15,32 \text{ mA}$$

$$e) t_{\text{bat},3} = \frac{C_{\text{bat}}}{3 I_{\text{LED},3}} = 217,5 \text{ h}$$
